

Premier ClinicalAdvisor™

PREMIER

“With respect to our medical staff, the Premier Perspective database provides the basis for our physician profiling, and it allows our physicians to compare their performance clinically against peers within our organization as well as peers across the country.”

Dennis Vonderfecht, President and CEO, Mountain States Health Alliance

In an environment where hospitals must continually improve quality while reducing cost, it is essential to not only have the necessary processes in place, but also the tools to monitor and measure performance to ensure facilities meet their goals.

ClinicalAdvisor™, an essential component to Premier’s QualityConnect™ program, is the leading clinical efficiency and quality performance benchmarking application in the healthcare industry. Its power lies in its ability to quickly provide critical performance measurements against comparative benchmarks in Premier Perspective™, the nation’s largest clinical and operational comparative database.

With Premier ClinicalAdvisor™, hospitals have more flexibility to assess detailed comparative clinical outcome measures, clinical resource utilization, and transaction-level cost data to improve both processes and outcomes in their organizations.

ClinicalAdvisor further refines disease category processes by integrating evidence-based research, identifying quality variance drivers, and evaluating physician practice variations. All of this power allows hospitals to make data-driven decisions to increase the quality and efficiency of care.

- ▶ **Physician performance:** Formalize physician reporting and provide actionable feedback with Physician Profile reports.
- ▶ **Financial performance:** Improve financial performance through service line and resource utilization analyses.
- ▶ **Clinical performance:** Supply performance improvement teams with comparative information that prompts action.
- ▶ **Compliance:** Achieve regulatory compliance with one solution for submitting quality measures.
